

# BIGVEE

Driving onto your trailer, missing the bow stop and potentially causing damage to your boat or winch is now a thing of the past. Thanks to BIGVEE™ you can drive on knowing you can land the boat in the perfect position every time – whatever the weather.

- Made to suit new trailers or to be fitted to existing builds.
- Has a super wide VEE guiding ability.
- Is locked tightly in place through the steel centre that can never crush.
- Is fixed in place without possibility of the centre bolt bend.
- Has a secondary lock allowing you to rotate and set the Vee in the correct orientation to your boat bow.
- This “one size fits all” design locates in the same position as your old bow stopper.
- Suits trailers with bow stopper spacing from 75mm up to 120mm (use the provided spacers to adjust).
- Replaces bow stoppers with both M12 and M16 bolts (1/2 inch and 5/8 inch bolts).
- Grade 8 galvanised main bolt supplied.
- Made from galvanised steel with a protective polyurethane coating. It gives you boat protection from rub as you drive on and gives vibration insulation whilst traveling on roads. The solid galvanised steel centre actually has the added benefit of strengthening the trailers 2 upright arms. This means they can withstand a higher impact from the boat if you were ever to driving on too fast.
