

SALT-AWAY®

ENGINE FLUSH INSTRUCTIONS

1. Put 40-60mls (min 1/2-3/4 cup) Salt-Away concentrate in mixer cup for up to 90hp motor, and for 90-300hp use 80mls (full cup) to flush your engine, wash boat, trailer, fishing and diving gear.
2. Connect A-Salt mixer to flush muffs.
3. Connect hose to A-Salt mixer, have mixer set to rinse position. This allows water to flow through engine.
4. Turn on water supply, ensuring you have a good water supply.
5. Start your motor if you run it normally otherwise allow water to flow through engine for 5 minutes to pre-rinse engines.
6. Now turn mixer to Salt-Attack position. This allows Salt-Away to flow through your engine.
7. **You will see foaming action coming out of the exhaust.**

8. Allow foaming action for a further 30 seconds to a minute maximum then turn motor off. Then turn mixer to off position to leave Salt-Away in your engine to protect against rusting and corroding. Salt-Away leaves a protective film.
9. Connect garden spray gun to Salt-Attack mixer.
10. Have sprayer set to misting or fan type spray.
11. Turn mixer back to Salt-Attack position.
12. Now wash down your boat inside and out.
13. Then trailer, axle, trailer brakes, rollers, springs, draw-bar, coupling, mud-guards and wire winch.
14. Don't forget the back of your tow vehicle (most people do).
15. Now do up the drag of your fishing reel, and spray your rods and reels with Salt-Away. Leave Salt-Away on to protect from salt corrosion, no need to rinse off.
16. Salt-Away will not hurt your rods, reels, nylon or braid.
17. Let it air dry, then release the drag.

NOTE:

SALT-AWAY'S SALT BUILD UP REMOVAL PROGRAM For overheating engines or older engines

Flush your engine according to the engine flush directions 4-5 times in sequence, waiting at least 24 hours between flushes. During this process do not expose the engine to salt water, if possible.

The outside of a fibreglass hull, glass windows, cleats, carpets and upholstery should be rinsed off after applying Salt-Away, then towel dried for a perfect finish. Any metal areas i.e. trailer, trailer brakes, aluminium boat Salt-Away can be left on for added protection.
