

Maintain your seacocks regularly
whilst on the water
with

SeaburgTM

Often we sadly neglect the maintenance of our skin fittings due to the time and expense involved. Appearances can be deceptive and what we perceive to be a clean & effective seacock could be a dangerously corroded accident waiting to happen.

Such a small piece of equipment as a seacock or hose can be responsible for huge amounts of damage.

Seabung introduces a quick and simple way to schedule this critical job into your routine safety checks. No need to haul out for inspections with Seabung as it plugs fittings while afloat allowing you cost effective repair or replacement.

Seabung is also an essential emergency device, outperforming the traditional wooden bung in speed, ease of use and permanence of application.

- Each pack of two seabungs (supplied in diameters of 60 and 90mm)
- Super Flexible tear resistant dome
- A seacock can be replaced in under 2 minutes
- Reusable
- Simple clear directions for use
- Covers hole sizes 19 – 51mm
- Allows permanent repair
- Able to tether if close to the waterline

Revolutionary

Seabung's unique flexible dome fits easily through a seacock or damaged area before pinging back into shape and stemming the flow of water.

Durable

Seabung's flexible, elastomeric TPU outer with tough ABS plastic core provides ultimate strength and flexibility.

Versatile

Seabung is supplied in packs of two which fit holes 19–32mm and 25–63mm equipping you to use with a variety of skin fittings.

Secure

Seabung's tough moulded eyelet allows it to be tethered in place in emergency situations, when an immediate repair is not possible.

Bringing peace fo mind to
boat owners worldwide
