

# STORMY

**Inflatable PFD Technologies**

**The Stormy Wet weather pants** are constructed in the Stormy PU coats Nylon fabric, which is also used in our Stormy Jackets and Vests.

Breathable and waterproof, the pants feature an

elasticised waist, Hi-Vis shin strip and a Velcro ankle strap for tightening to avoid water rushing.

With a height of only 18mm this light can easily fit into any lifejacket without hampering movement of lifejacket material. This extremely visible LED light is an automatic water activated light with a manual on/off button. In dry mode the

button works as a test button - when pressed the light flashes rapidly.

Smooth and rounded edges ensure lifejacket integrity. No lead in the water is necessary - once activated the light stays turned on until manually deactivated on the button.

**Stormy Life Vest Classic Extra Small** comes with a waistbelt and does not compromise comfort, safety or ease of use.

The hard wearing nylon outer cover is sealed at

the sides with velcro. This Life vest is water activated, automatically expanding to reveal the yellow inflation bladder with oral inflation tube, complete with high visibility markings and a signal whistle attached.

**The Stormy Baby's foam life jacket** is accredited for all boating in Australian waters. This is ISO approved foam PFD and is suitable for baby's that are between 5 and 10 kilograms.

The robust materials, crotch strap, adjustable waist strap and grab handle make this the perfect life saving device for any baby. It will always self-right so the infants head is always out of the water.
